

17:00 - 20:00 - FSDI 104 Session #1 Cohort 28

- The common practice is to use CSS frameworks or templates, most of them are based on Bootstrap (<https://getbootstrap.com/>).
- "Object literal is a collection of data in one element" - Jason, 2022
- Anonymous object is a object without a variable name declaration.
- Use loops to travel the arrays.
- length is a property that returns the number of elements in an array.
- Travel the DOM once and store the info in a variable (don't go to the library everytime that you need the book's information).
- Access to the objects attributes using the . or ["attribute"].

This is for the assignment.

- Add the pets in the pets array.
