

## 17:00 - 20:00 - FSDI 104 Session #2 Cohort 28

---

We covered the object constructor and we implemented what we learned in the pet Salon.

An object constructor can help us creating different objects with the same structure, the values change.

We push the objects into the array.

It is important to pay attention to the local variables in the object constructor and the attributes (they are using the word **this**).
